# 1 Introduction

## 1.1 System Overview

### Purpose

This document is written for these parties with the following intent.

- Options Family B.C Organization.
  - intent: provide a comprehensive document stating all of the features that will be included in the **Options Family Resource Program Data Management System**.
- The software development team from the University of British Columbia's CPSC 319.
  - intent : provide the development team with a guideline of the features that will be delivered in the system's implementation.
- Any developers at Family B.C organization
  - intent: provide brief overview of the system functionality, and requirements, so that developers have general idea of the project.

### Scope

Name of the Software Product: **Options Family Resource Program Data Management System**

### The software product will perform the following tasks:

- Provide a centralized system for tracking individuals parents who attend programs offered by Options throughout greater Vancouver.
- Track assets such as toys, books, video, and pamphlets that have been given or lent to the customers (parents/guardians) and give staff quick access to information about the assets.
- The system will be hosted on the Microsoft Windows Server 2008 R2 operating system and accessible by client machines

### The software product will not perform the following task:

- The coordinator at **Options Family Resource Program** mentioned there is the possibility of tablets, however, this system will not be guaranteed to work on Samsung tablets or any other tablets due to compatibility issues and company policies.

### The software's benefits, objectives, and goals:

This project is the Options Family Resource Program Data Management System. The main objective is to facilitate the input of client information into the software system, and be able to track and update the client information. It will also track assets that Family B.C Organization has lent to its clients. It will provide a centralized information system so that the amount of work required by

the staff at Options can be minimized, and manual work by pen and paper can be reduced.

## 1.2 Supporting Materials

General overview of Microsoft Visual Studio and Sql Server are found at:

[http://msdn.microsoft.com/en-us/library/52f3sw5c\(v=vs.100\).aspx](http://msdn.microsoft.com/en-us/library/52f3sw5c(v=vs.100).aspx)

<http://www.microsoft.com/en-us/sqlserver/product-info.aspx>

General Team website is located at:

<http://cs319teamse7en.wordpress.com/>

Final version of Software Requirements Specification Document available at:

[https://docs.google.com/document/d/1yV1TDELgWYrPoSFZe0iUm9xVVq5kcSGAyPFhPL\\_9h44/edit](https://docs.google.com/document/d/1yV1TDELgWYrPoSFZe0iUm9xVVq5kcSGAyPFhPL_9h44/edit)

## 1.3 Definitions and Acronyms

UML - Unified Modeling Language

SRS - Software Requirements Specification, this document which outlines the requirements that the software must fulfill. Entirely design independent.

GUI - Graphic User Interface

UI - User Interface

MVC - Model View Controller

OFRPDMS - Options Family Resource Program Data Management System

Client - Options Community Family

FRP - Family Resource Program

Staff Users - An actual staff of FRP

Admin Users - The administrator/supervisor of all staffs in all locations of FRP

Entry - Table entry in database

Program - Any services offered by Options Community Services

Event - Special activities that happen on a specific day (ie Story Time)

## 2 Design Considerations

### 2.1 Assumptions

- The main users of the software are assumed to have a low level of technical knowledge.
- There will only be a maximum of 20 users simultaneously accessing the database.
- The users of this software will enter correct and valid data into the system.

### 2.2 Constraints

- Operating System
  - Must be hosted on Windows 2008 R2
  - The software should work on Windows
- Platform
  - The database must be SQL Server 2008 R2
- Software availability
  - All software used in the system must already be licensed or freely available

### 2.3 System Environment

The system will be hosted on a centralized server and be accessible by users from all the centers located in different geographical areas. The hardware that will be used is already operational and hosts the Windows Server 2008 R2 operating system. Therefore, our product will be hosted on Windows Server 2008 R2 with Microsoft SQL 2008 installed.

## 3 Architecture

### 3.1 Overview

OFRPDMS will use the Model-View-Controller architecture. There are two main levels of infrastructure: the client side, and the server side. The server side will contain the Model component and the Controller component. The Model component is the bridge between the database and the Controller. The Controller will take the inputs sent from the View and use the data to update Model. Conversely, the controller takes data from the model and updates the View. The view component is the GUI that the user will interact with to input data.

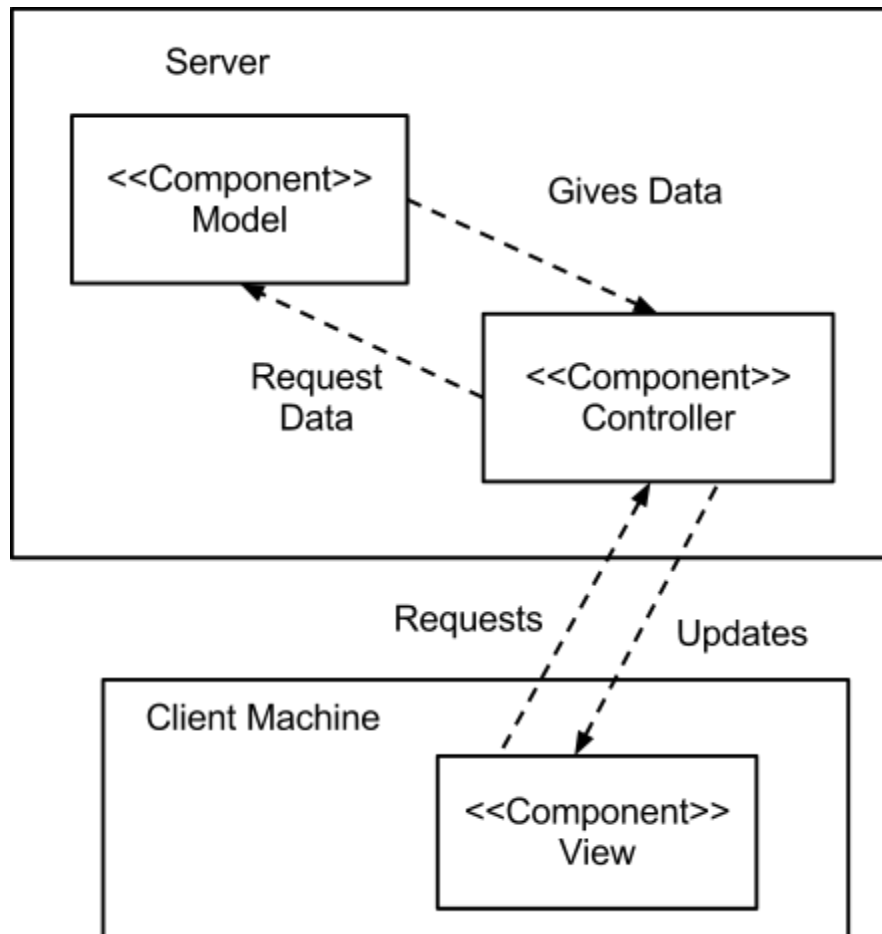

## 3.2 Rationale

The main reason for choosing the Model-View-Controller architecture is because the application can be entirely represented with MVC. The advantage that the MVC architecture offers is that the data, application logic, and presentation of the data are separated. This leads to a highly structured and more easily maintainable code. Lastly, the client can be thin client and thus only needs enough computing power to be able to process a view in a web browser.

Consider this example: the client needs to register a parent. The client would first use a web browser to open the web application and log in. To register a parent, the user would input the necessary data into the parent registration page (view). This data is sent to and handled by the `primary_guardian_controller` which relays this to the model and updates the database. When this data needs to be retrieved, it is initiated by the user from the view. The `primary_guardian_controller` handles this request and then passes the query to the model. The model fetches this data from the database, which is then sent back to the controller to be relayed back to the view and displayed on the browser. Throughout the process, the user only interfaces with the browser view. The logic, data storage retrieval exist on the server and are transparent to the user.

## 4 High Level Design

### 4.1 Conceptual View

<b>Model</b>	<b>Controller</b>	<b>View</b>
Primary_Guardian	Primary_guardian_Controller	Register_Parent_View
Secondary_Guardian		
Children		
Allergies_People		
Event	Events_Controller	Create_Sign_In_View
Special_event		
Event_participant	Sign_In_Controller	Sign_In_View
Center	Centers_Controller	Create_Center_View
Accounts	Admin_Controller	Create_account_view
	Staff_Controller	
	Log_in_controller	Log_in_view
Center Referrals	Referral controller	Referral view
Center_Free_Resources	Center_Free_Resources_Controller	Center_Free_Resources_View
	Generate_report_controller	Generate_report_view
<b><i>Borrower*</i></b>	<b><i>Primary_Guardian_Borrower_Controller*</i></b>	<b><i>Register_Borrower_view*</i></b>
		<b><i>Borrower_View*</i></b>
<b><i>LibraryItems*</i></b>	<b><i>Borrower_Item_Controller*</i></b>	<b><i>Add_library_item_view*</i></b>

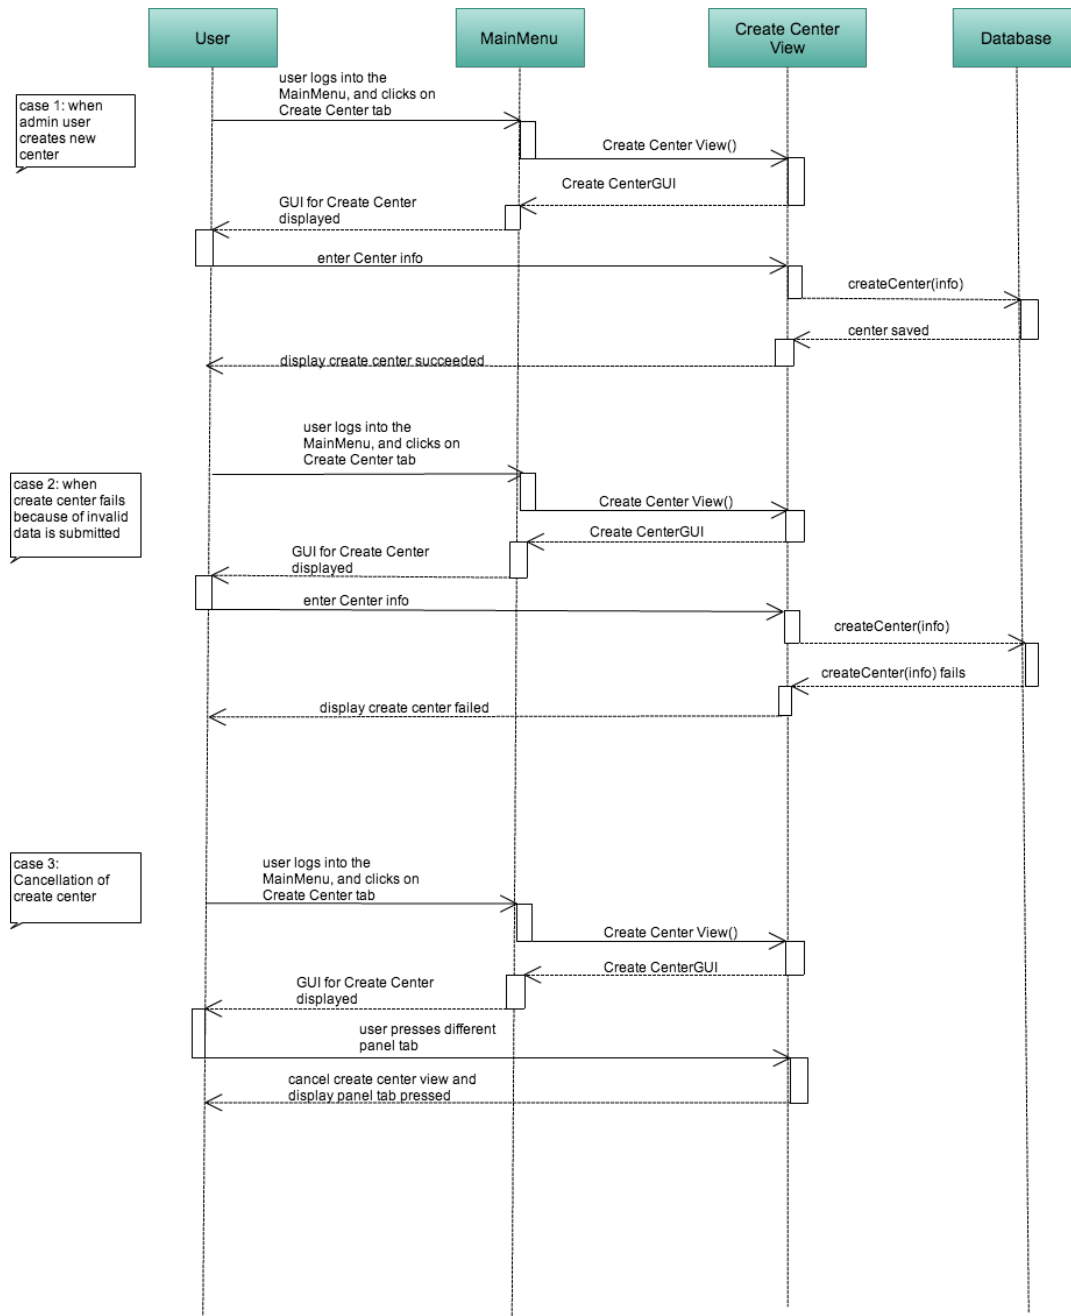

\*Extra features

## 5 Low Level Design

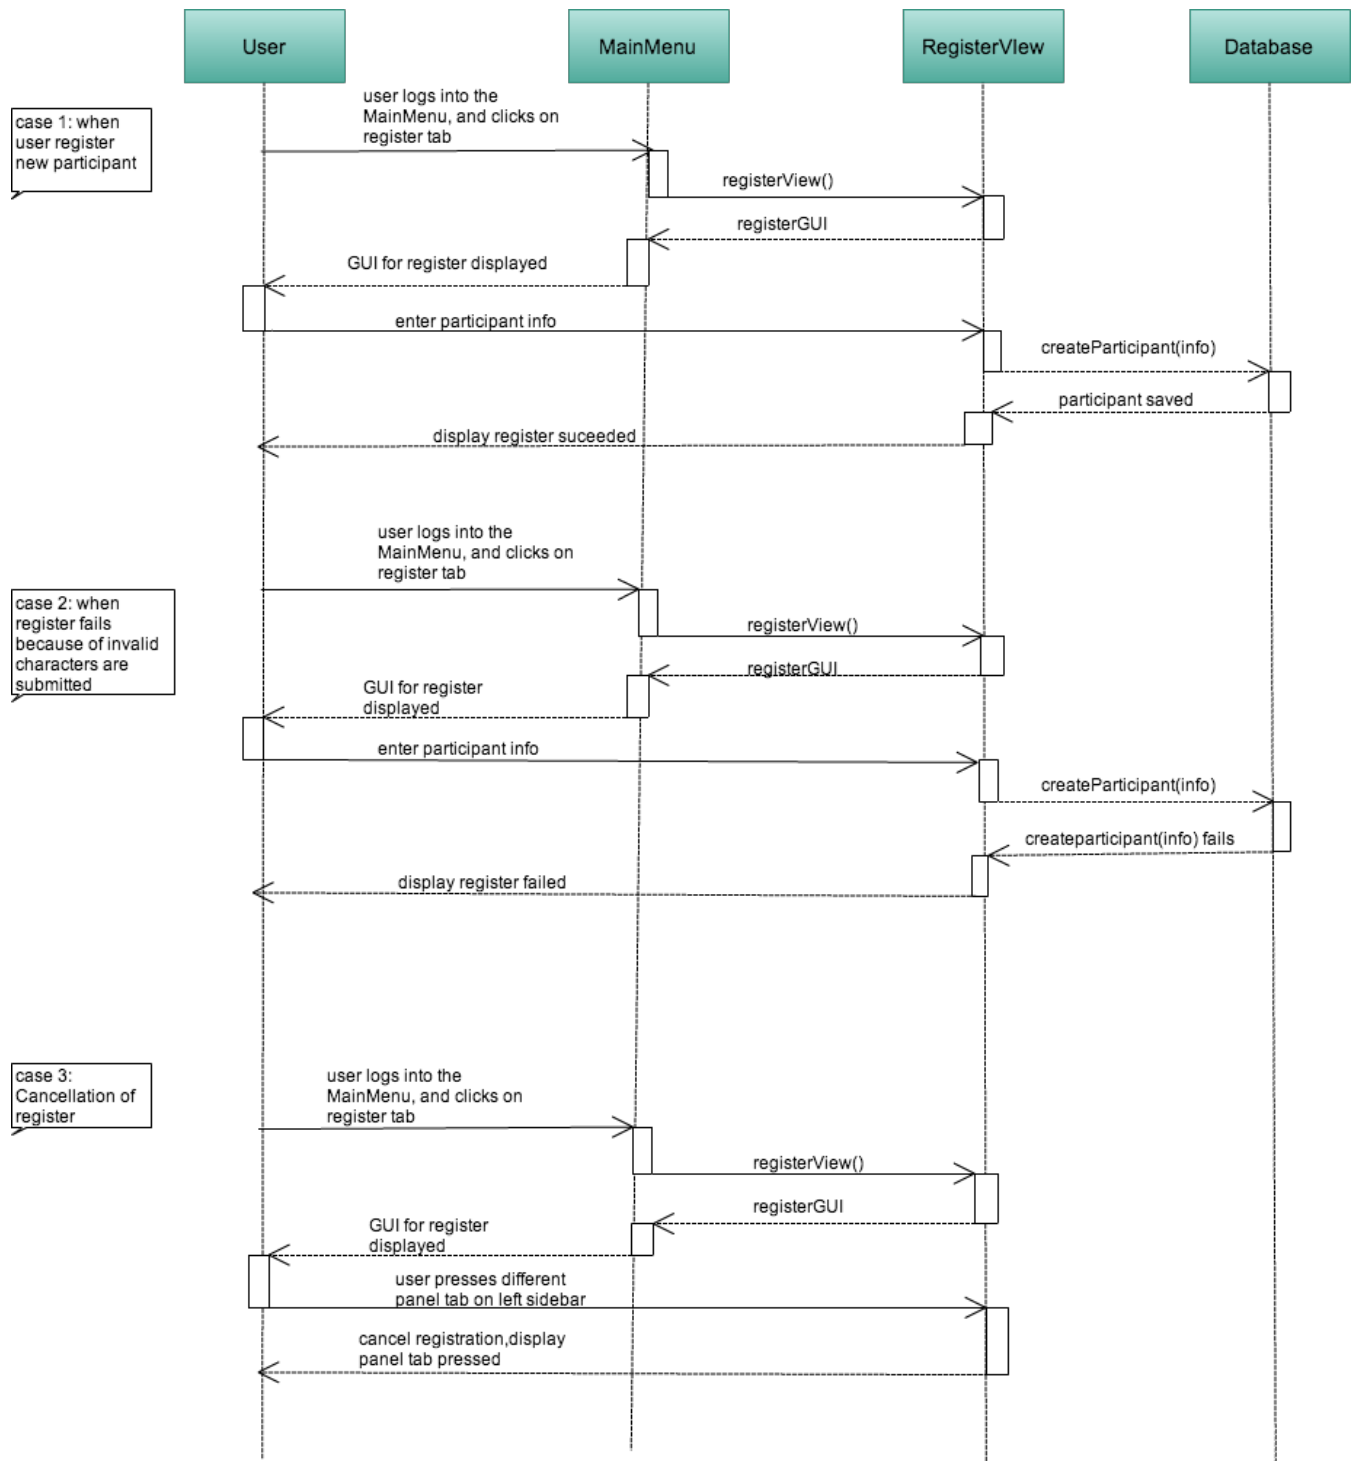

### 5.1 Sequence Diagrams 1..n

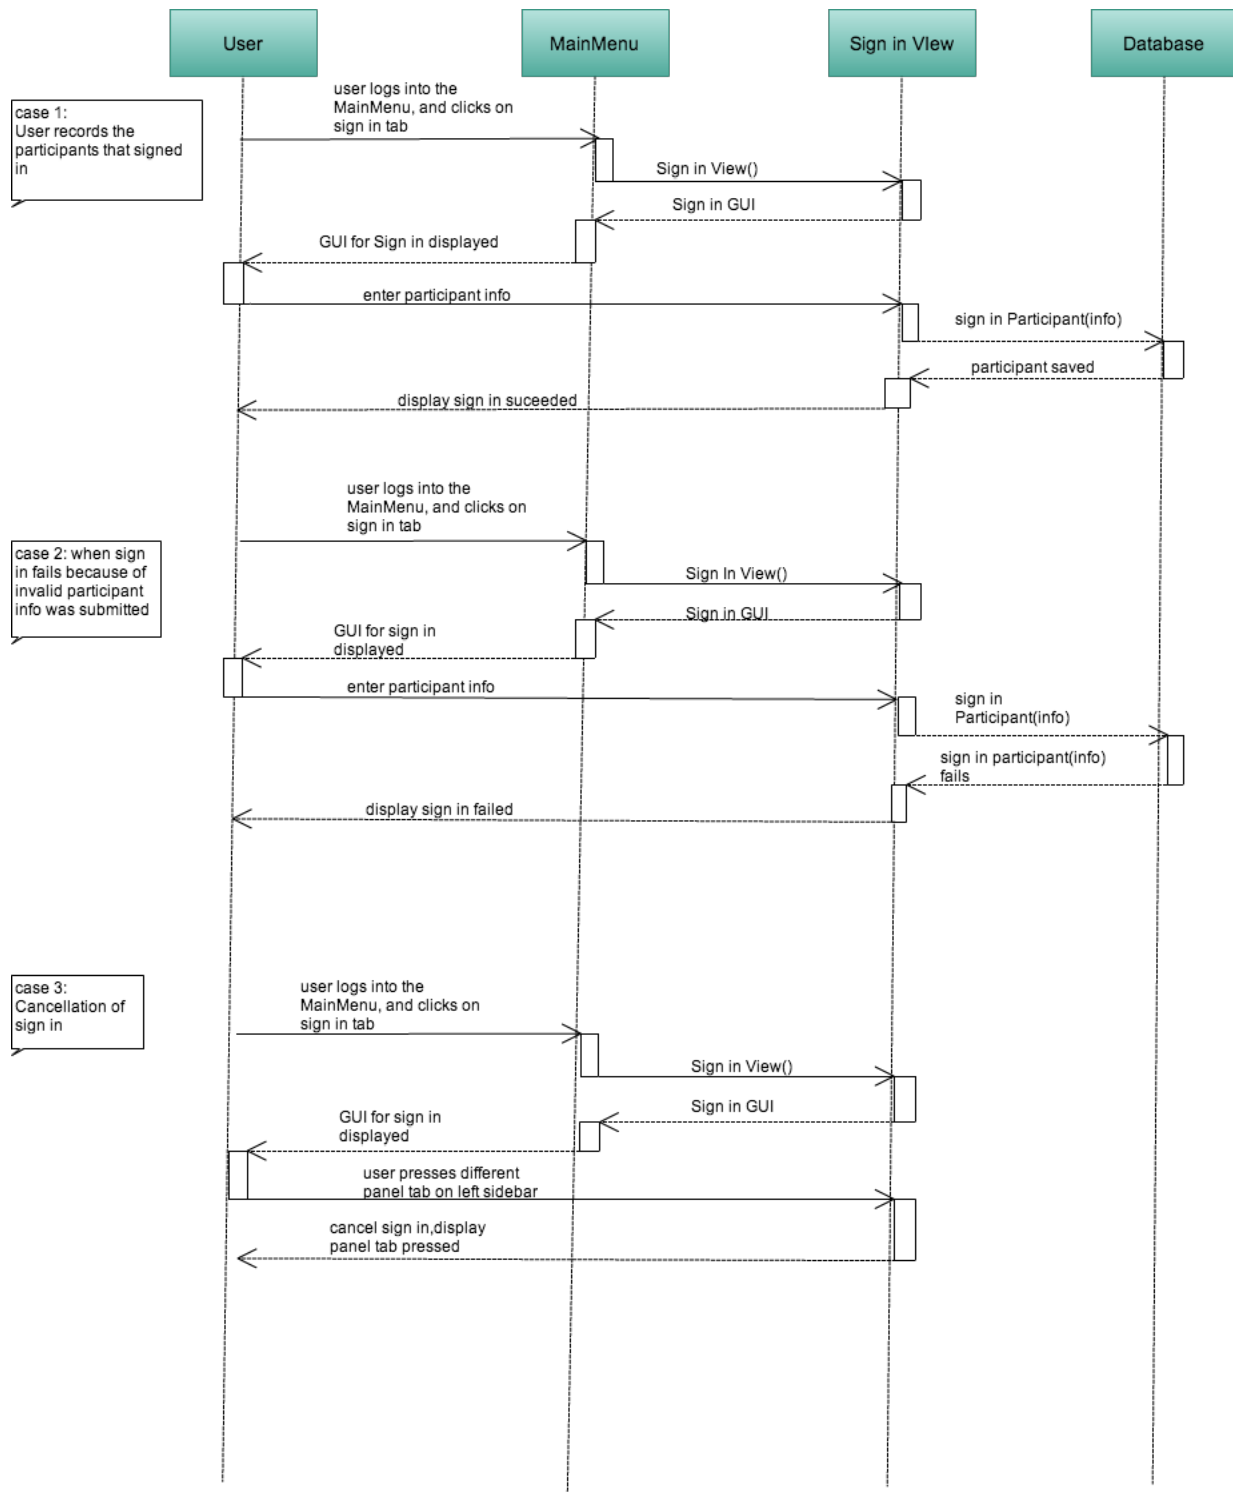

## Admins can Create Centers

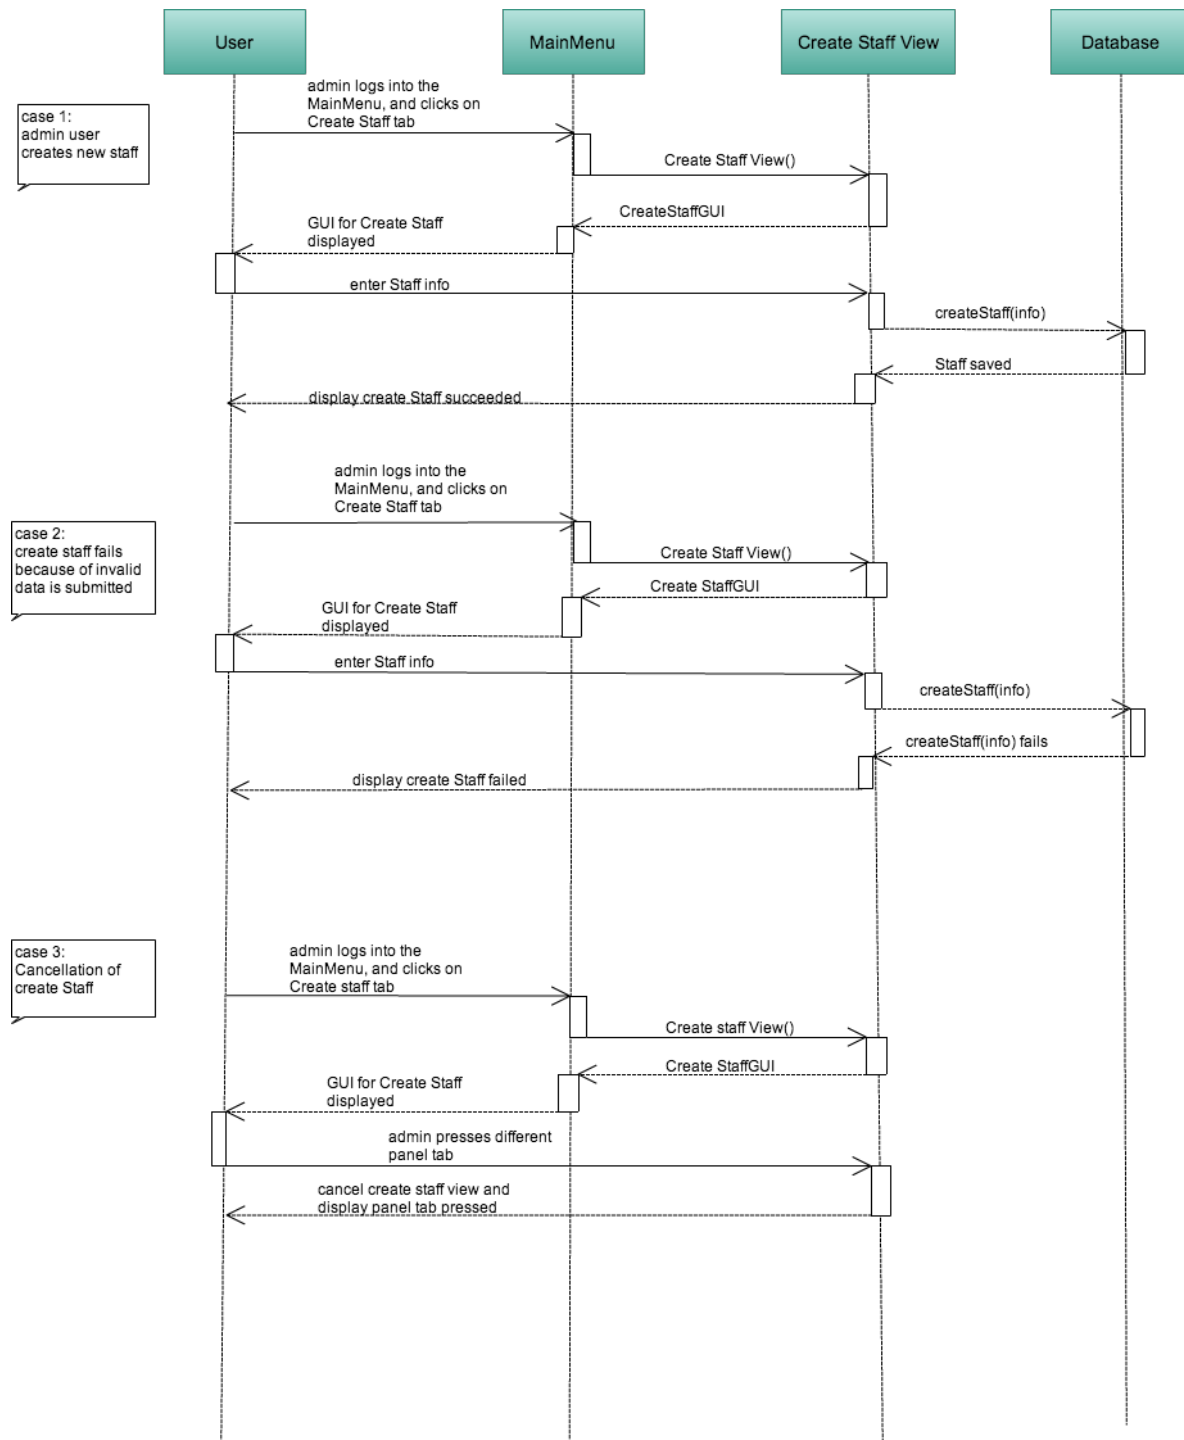

## Staff can Register New Participants

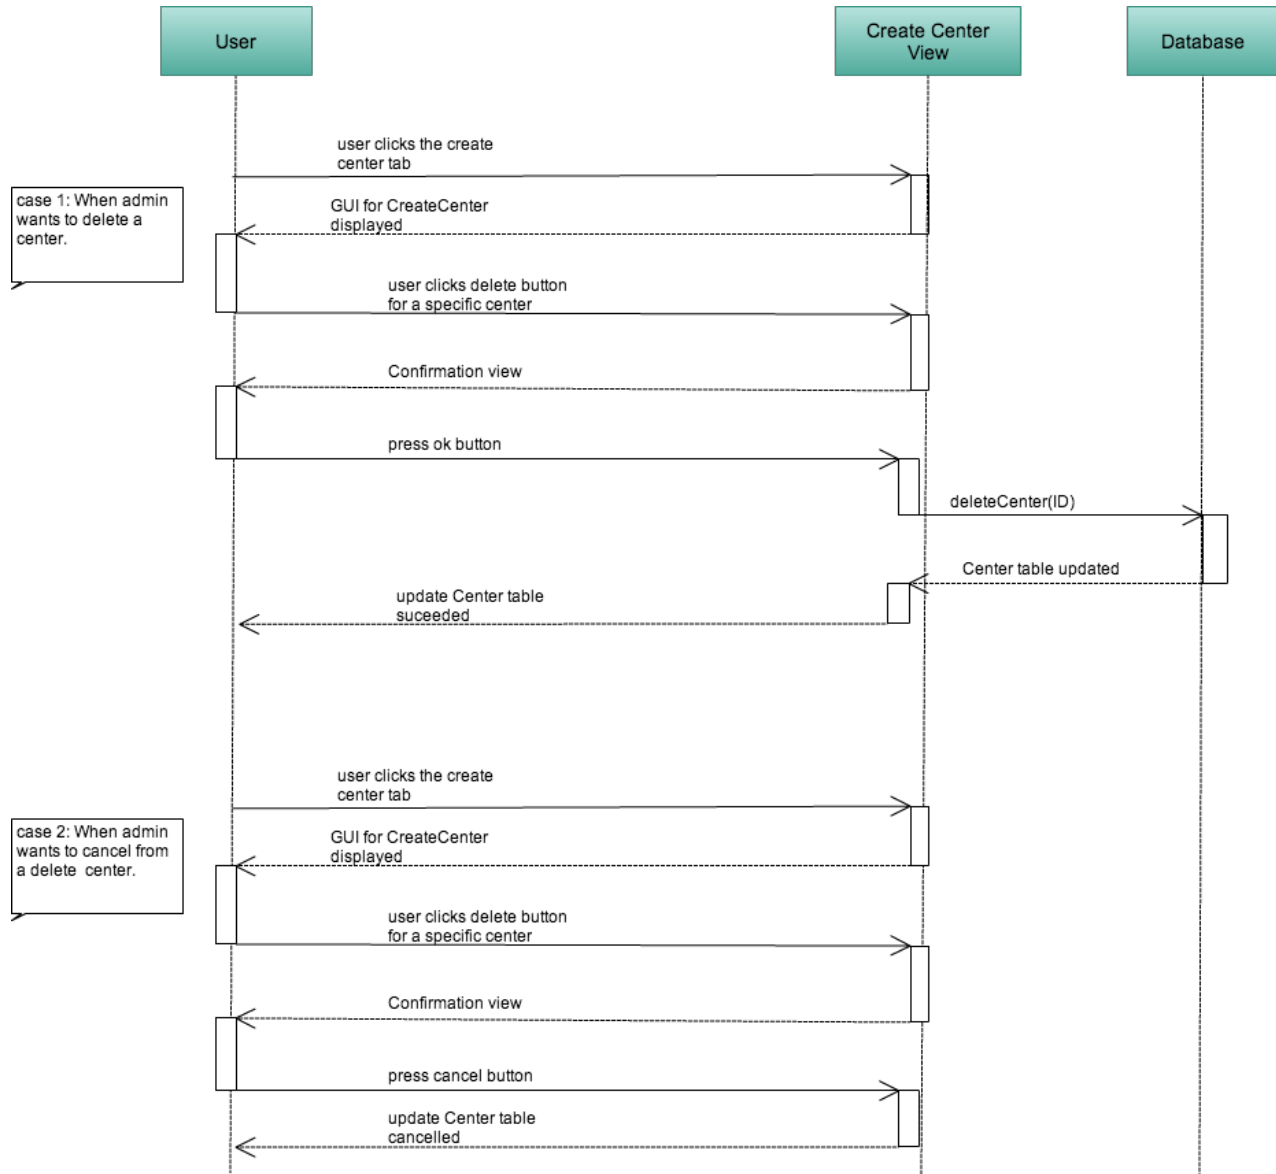

## Staff can Sign In Recurring Participants

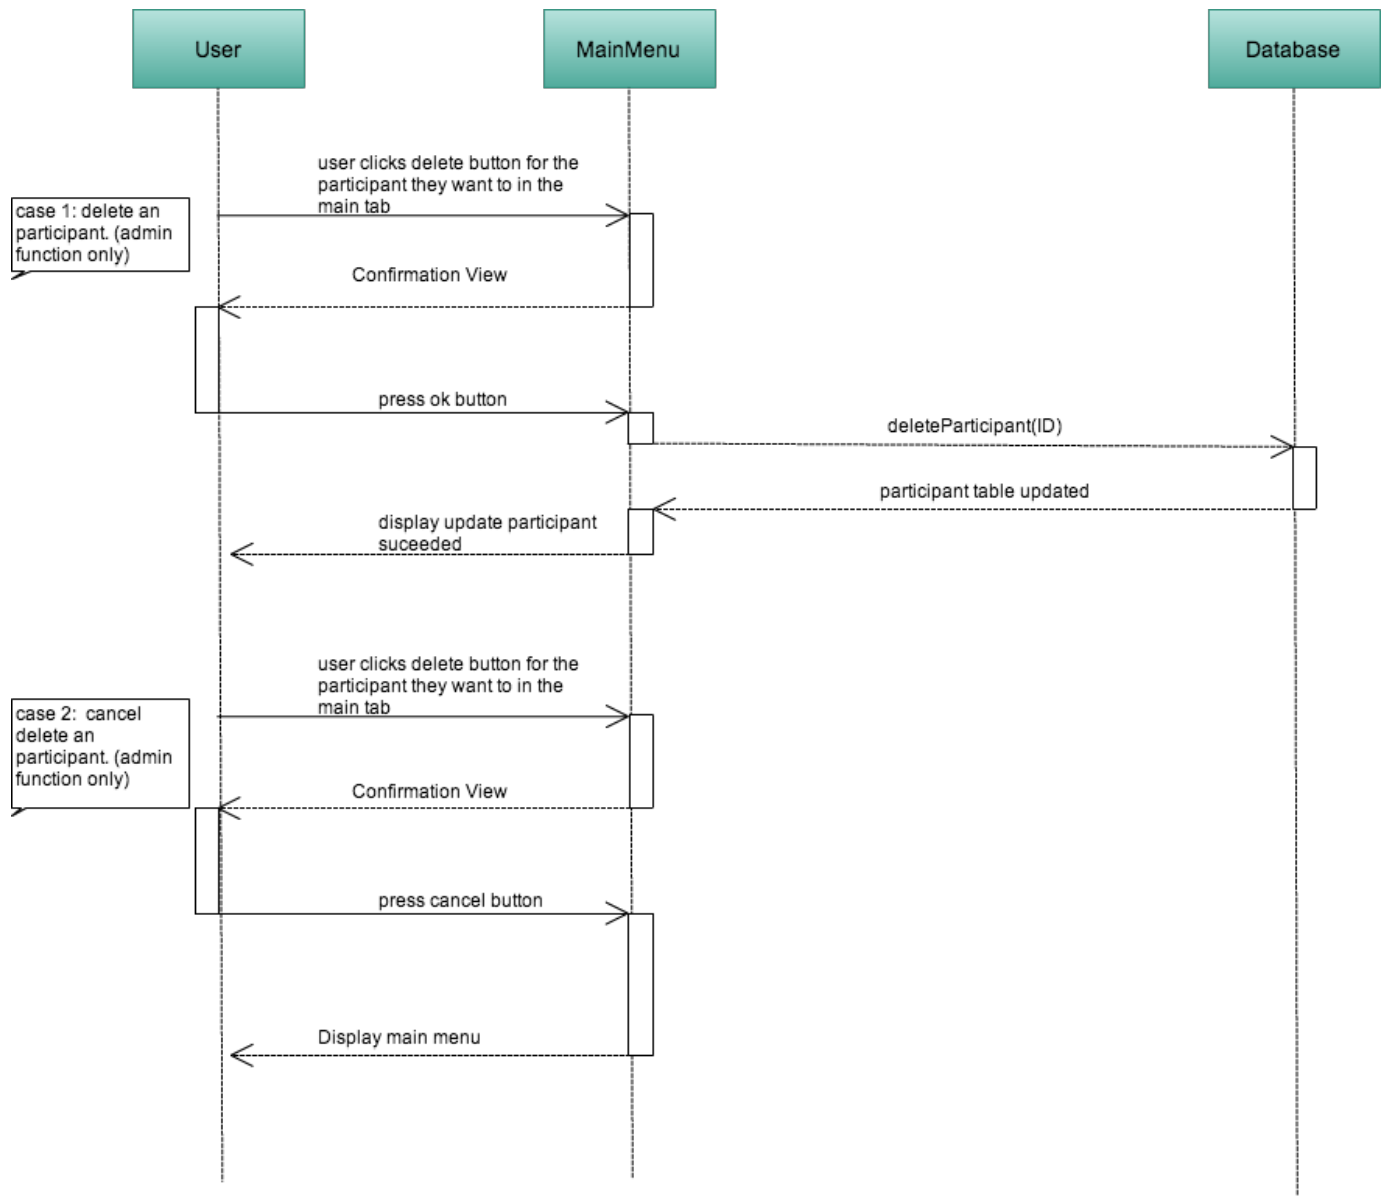

**Admins can Create Staff for each center**

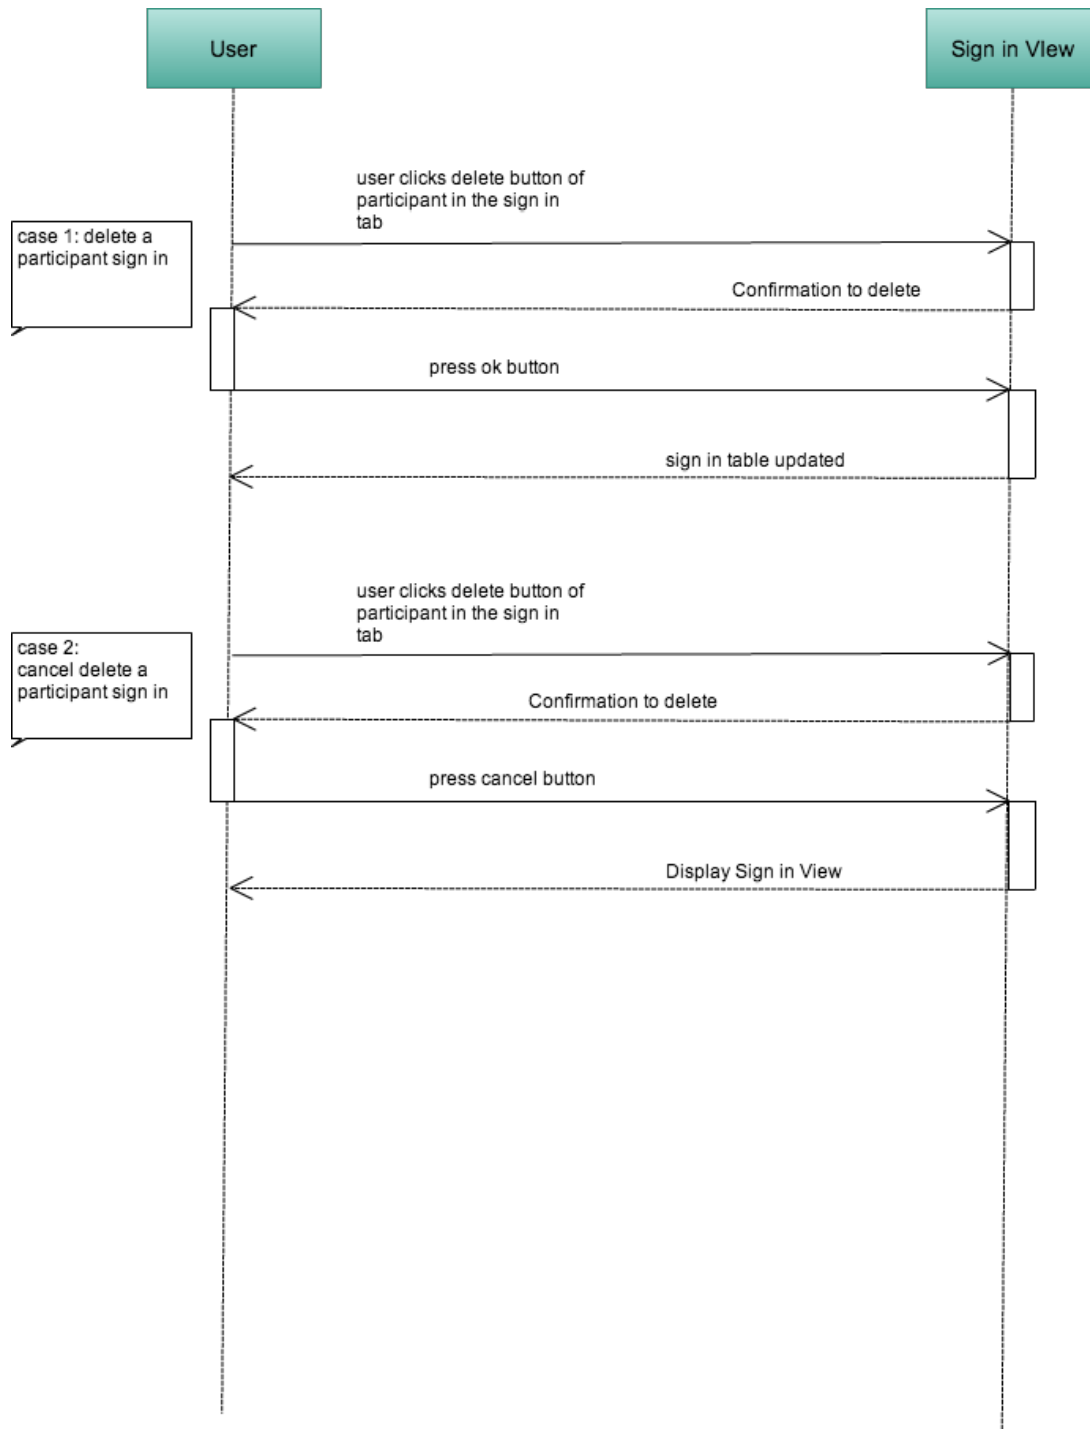

**Admins can Delete Centers from database**

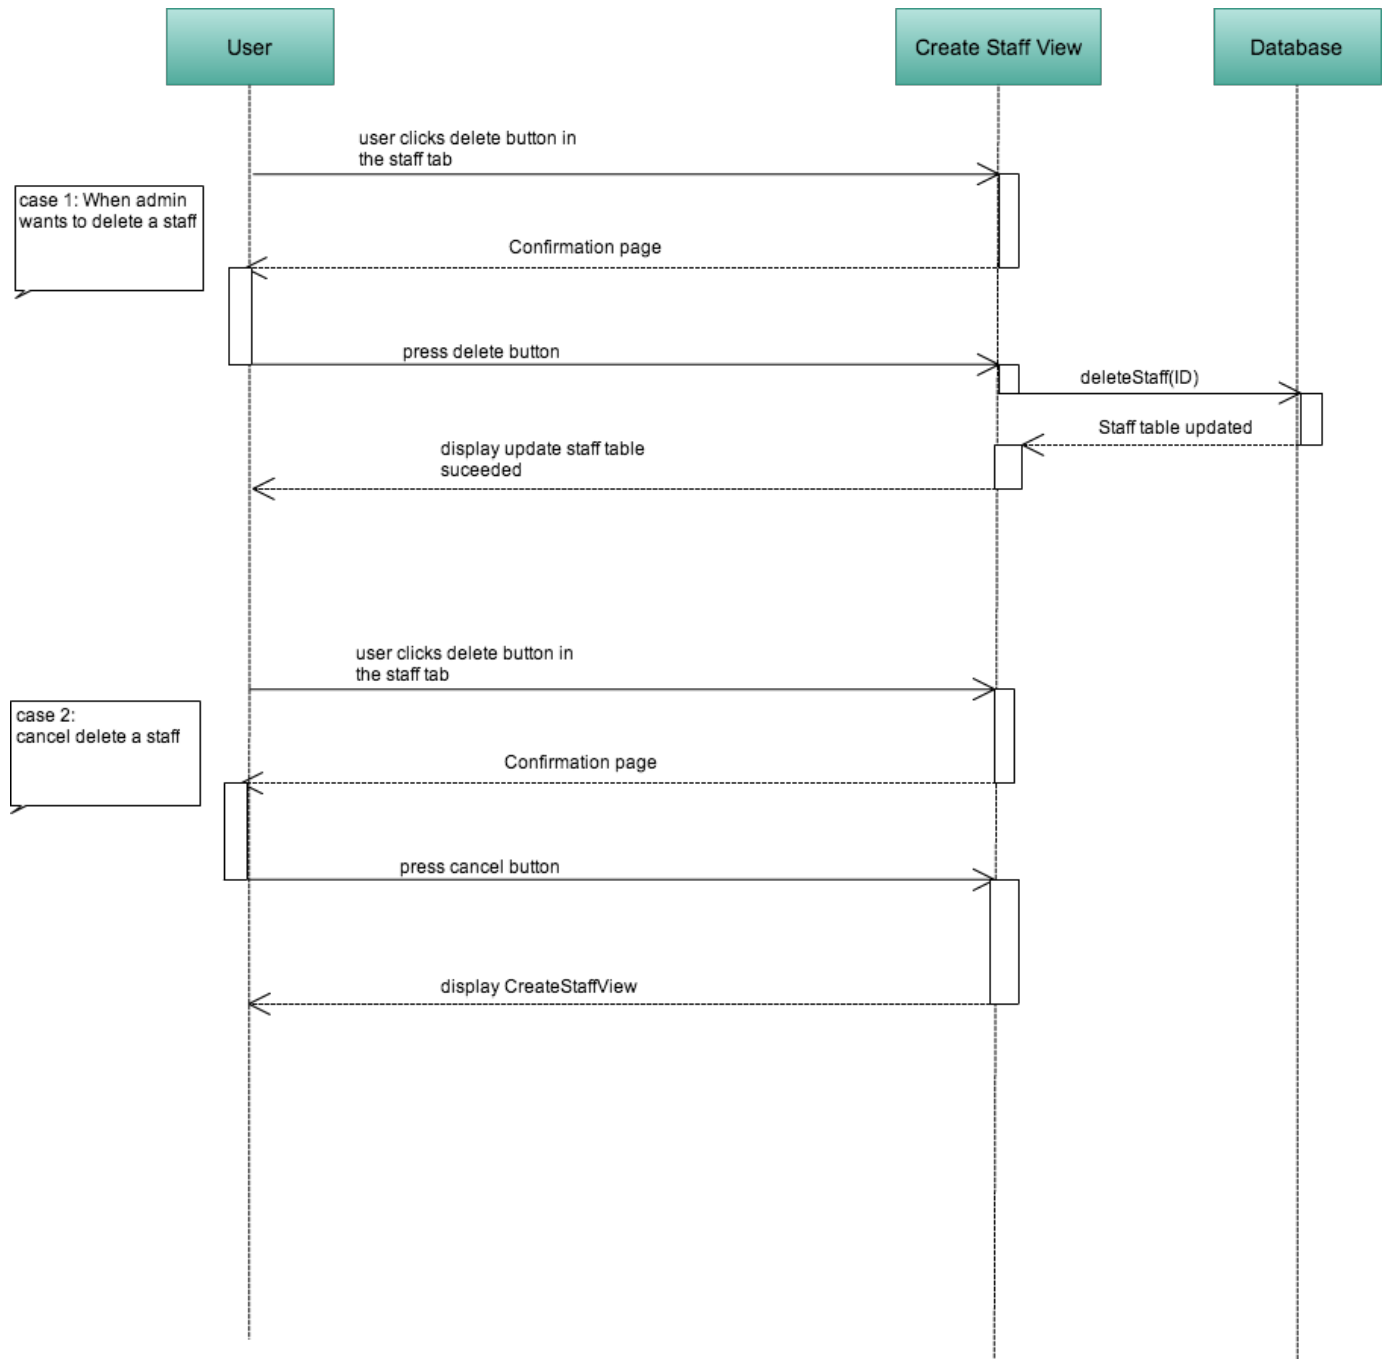

**Admin can delete participants from database**

**If mistake is made, staff can delete the entry in the sign in table before it stored into the database**

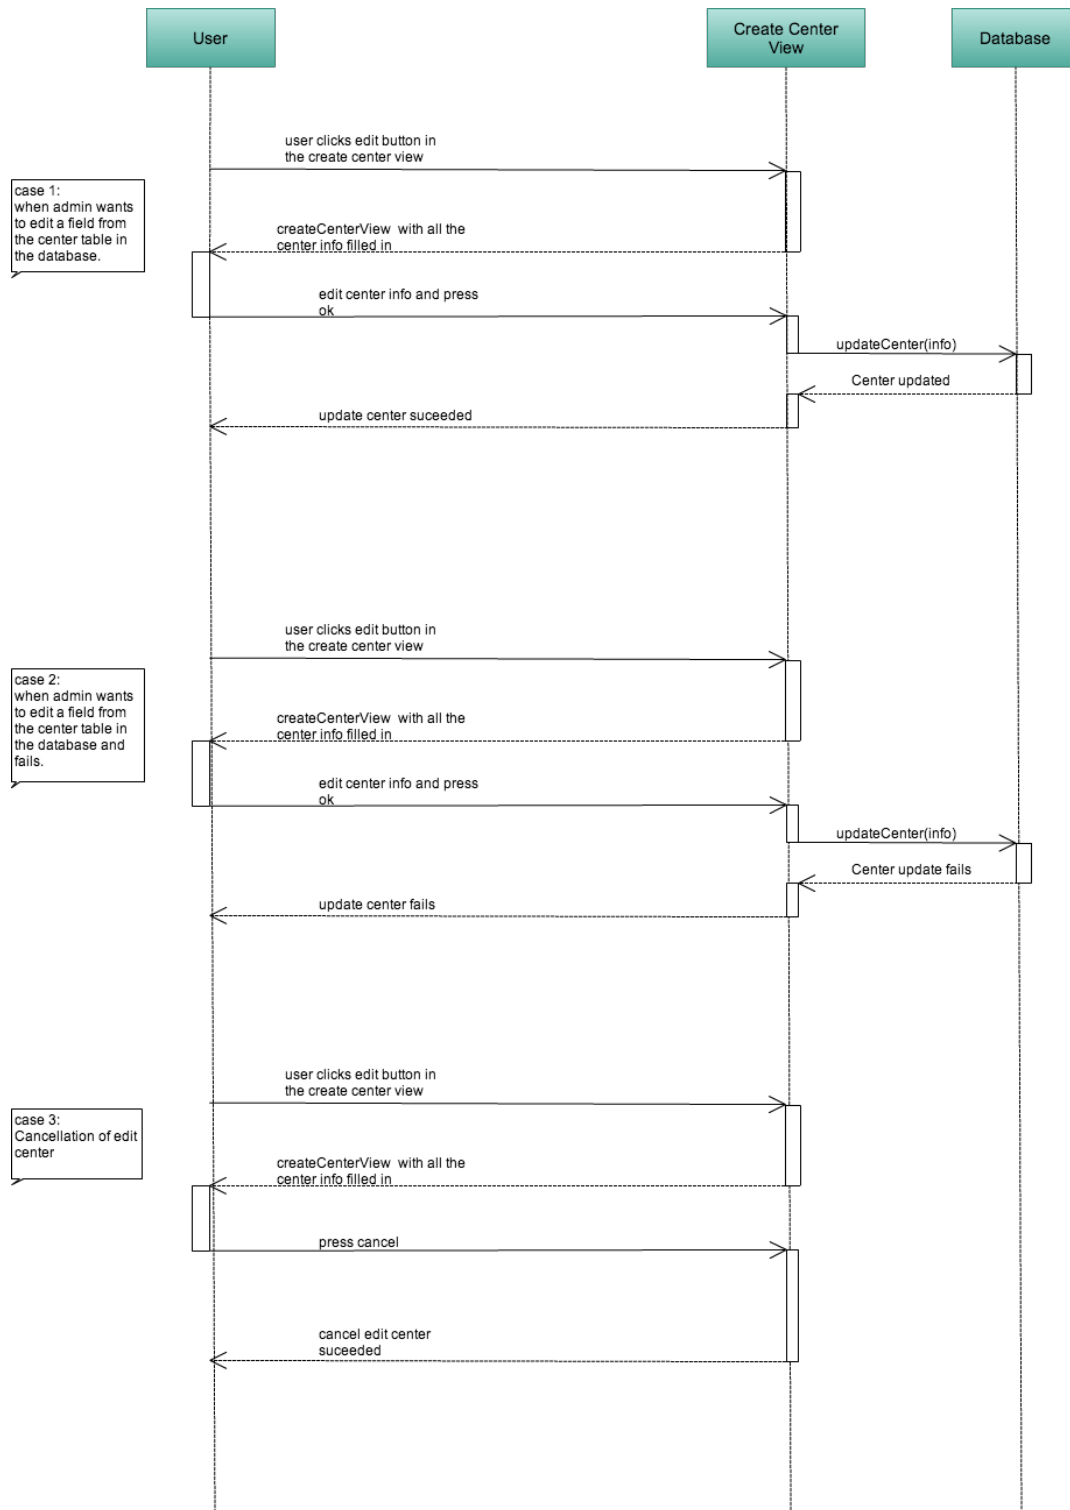

## Admins can Delete Staff

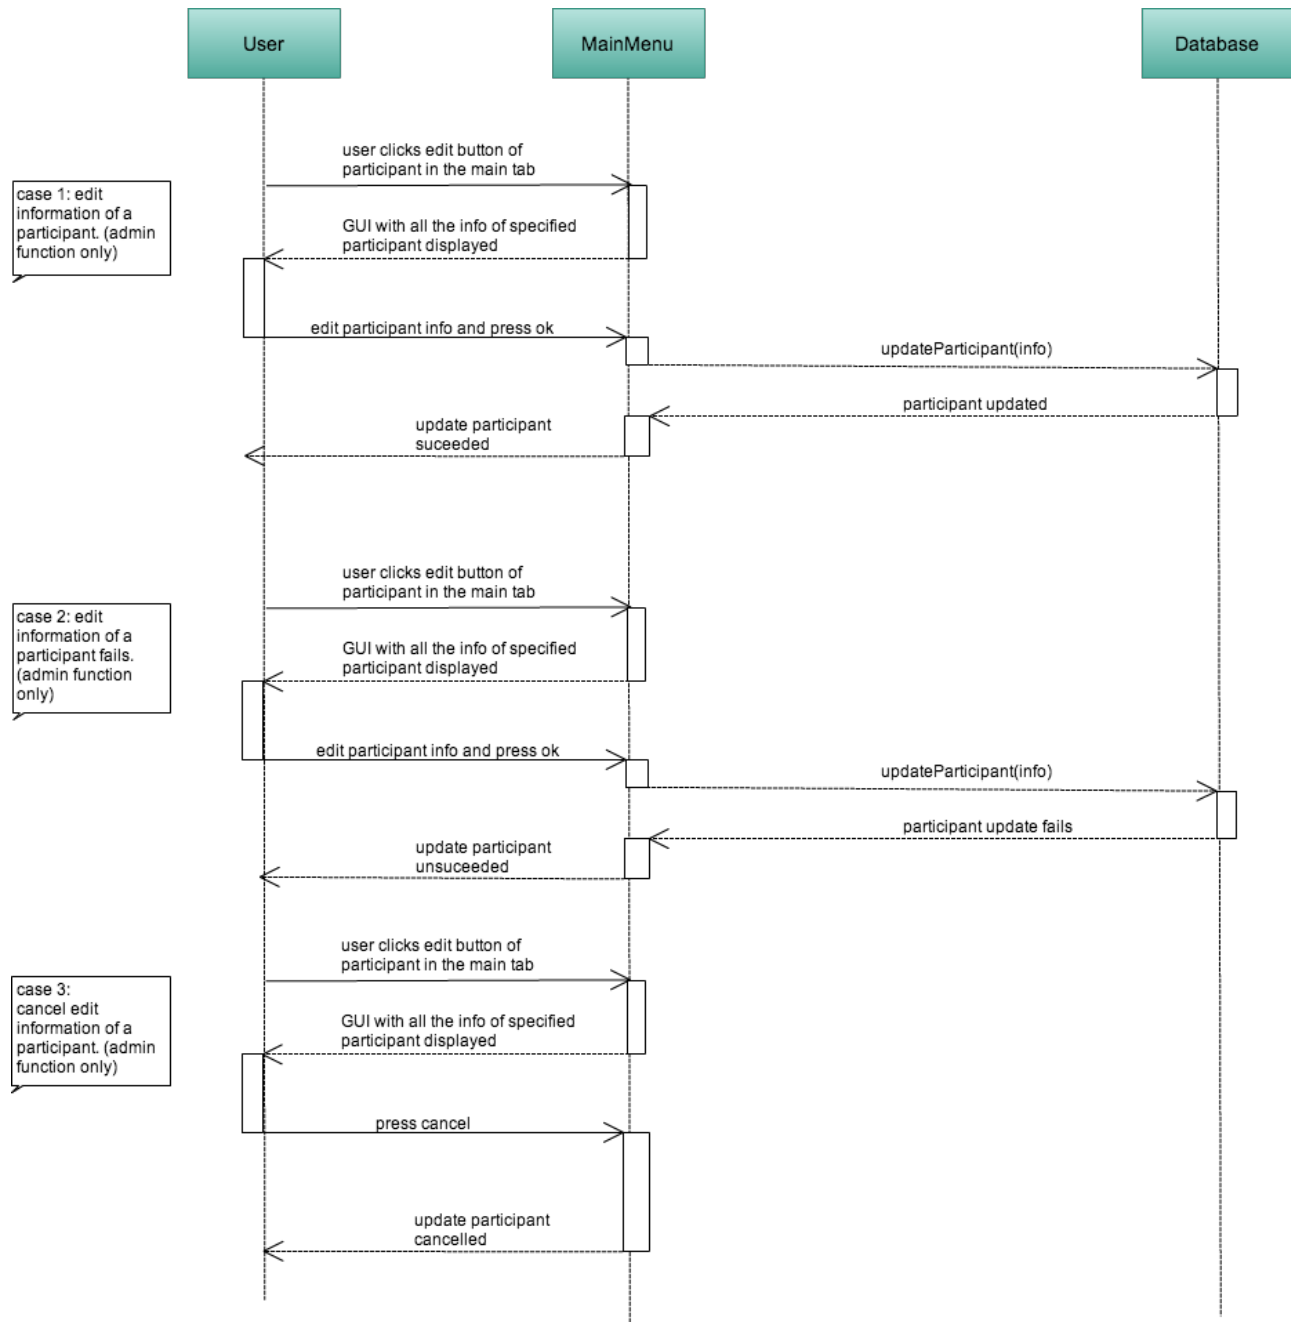

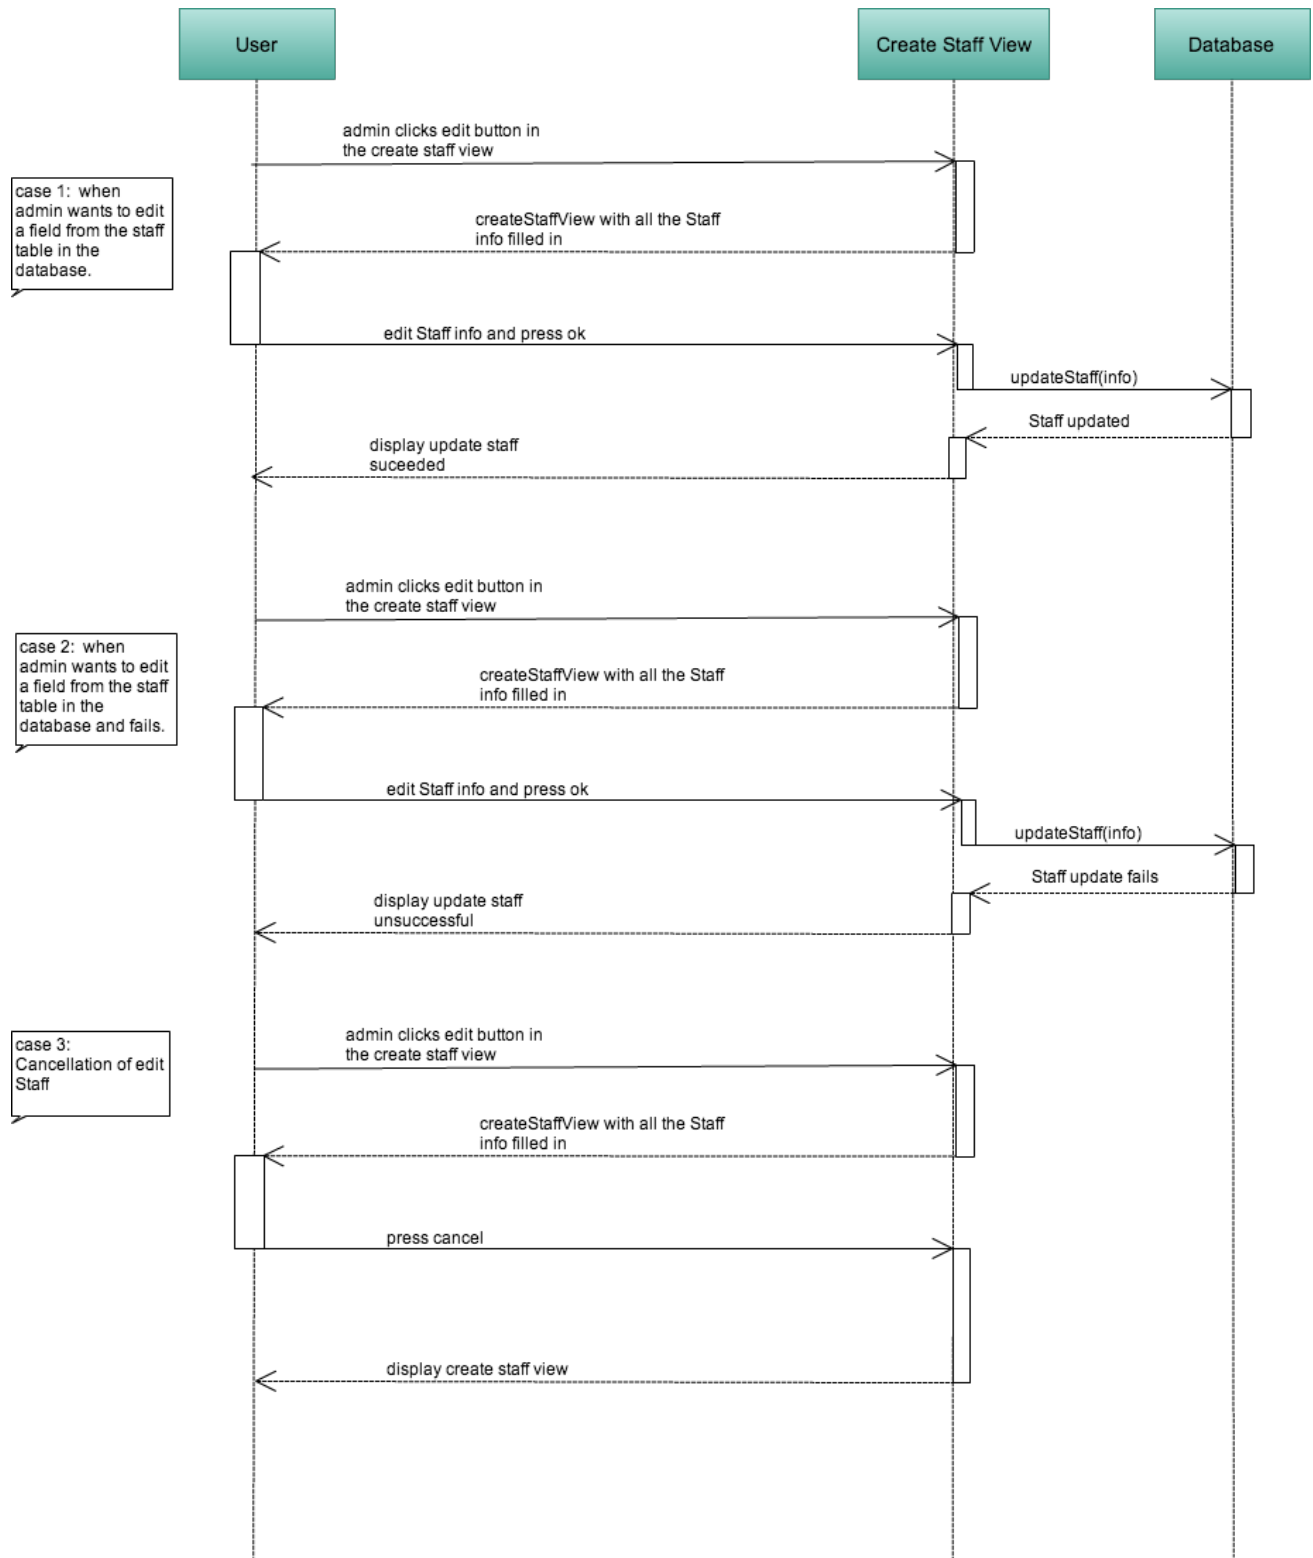

## Admins can Edit Center information

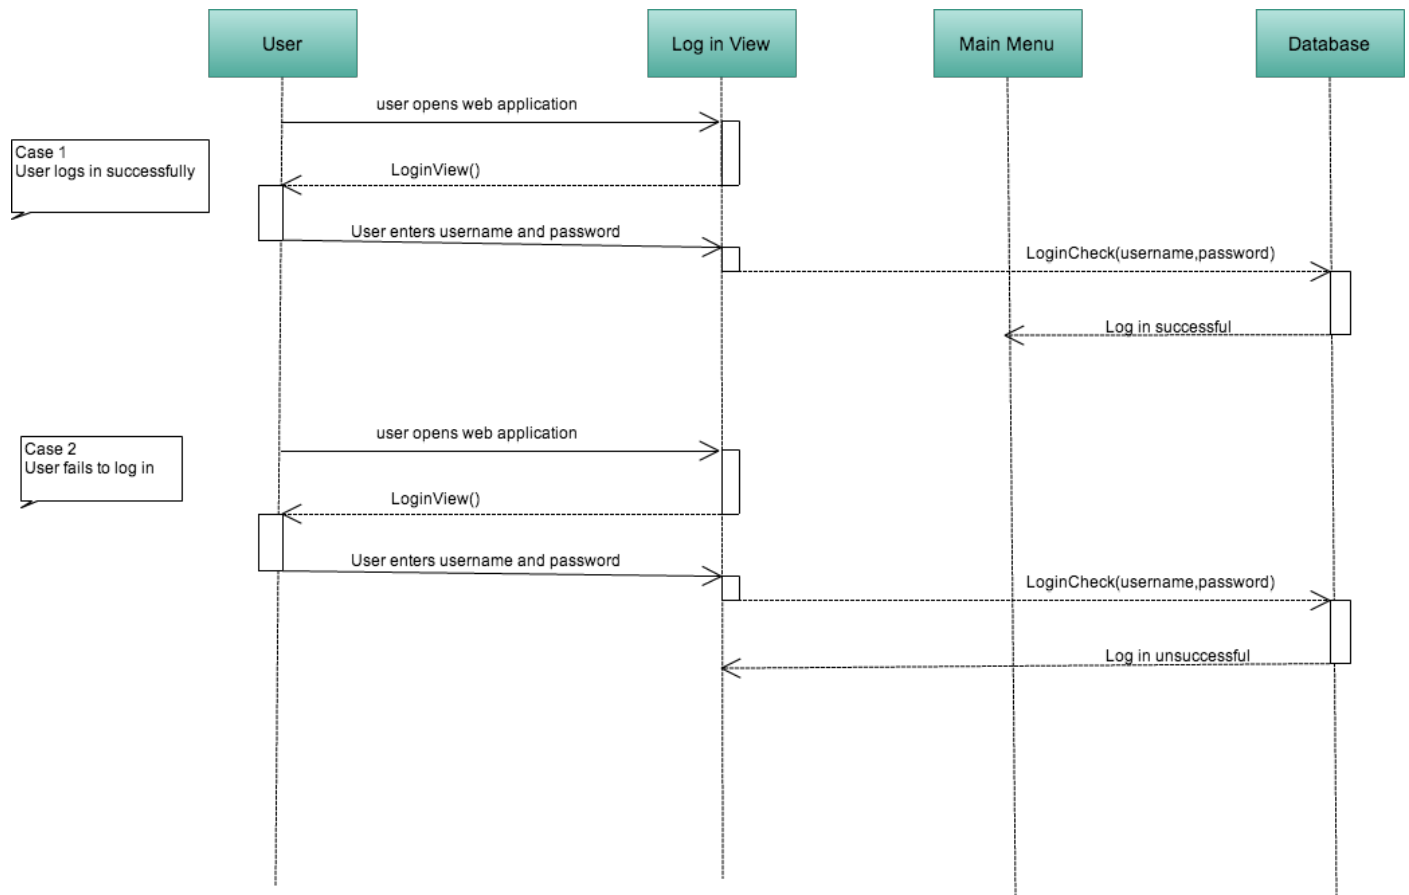

## Admins can Edit Participant information

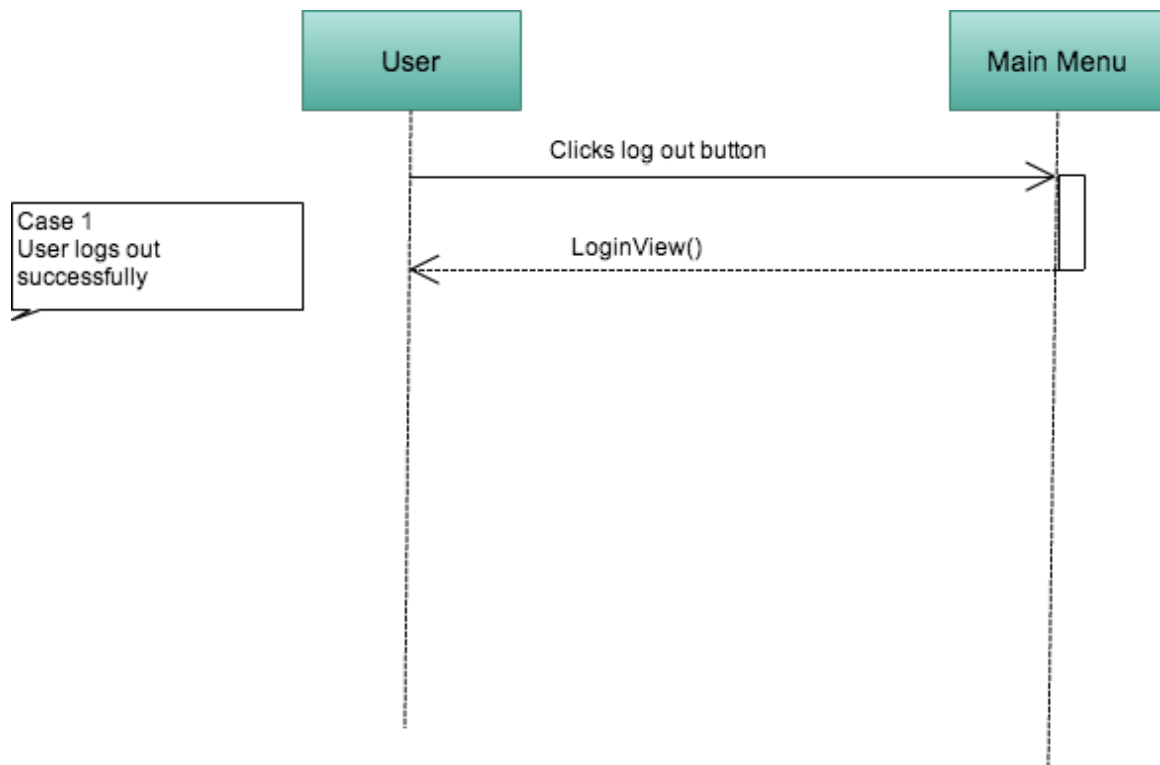

## Admins can Edit Staff Information

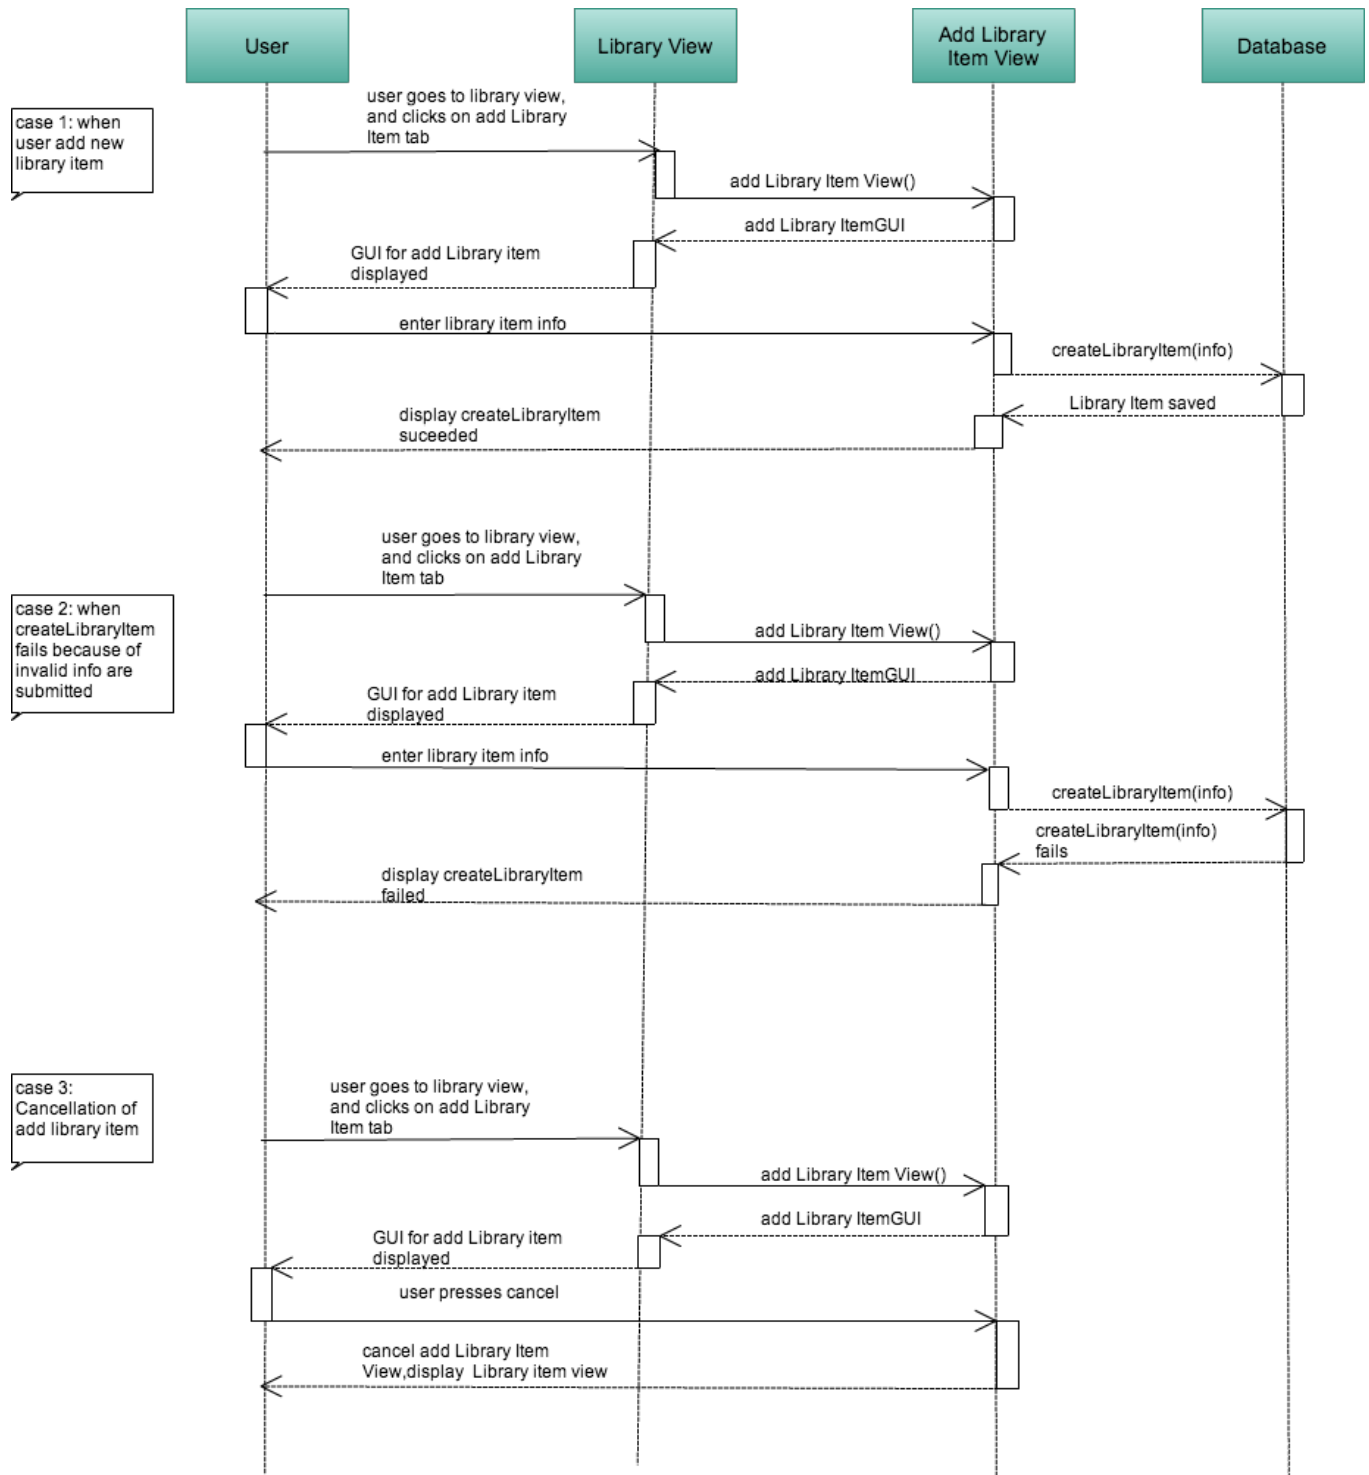

## Staff can Log In to the system

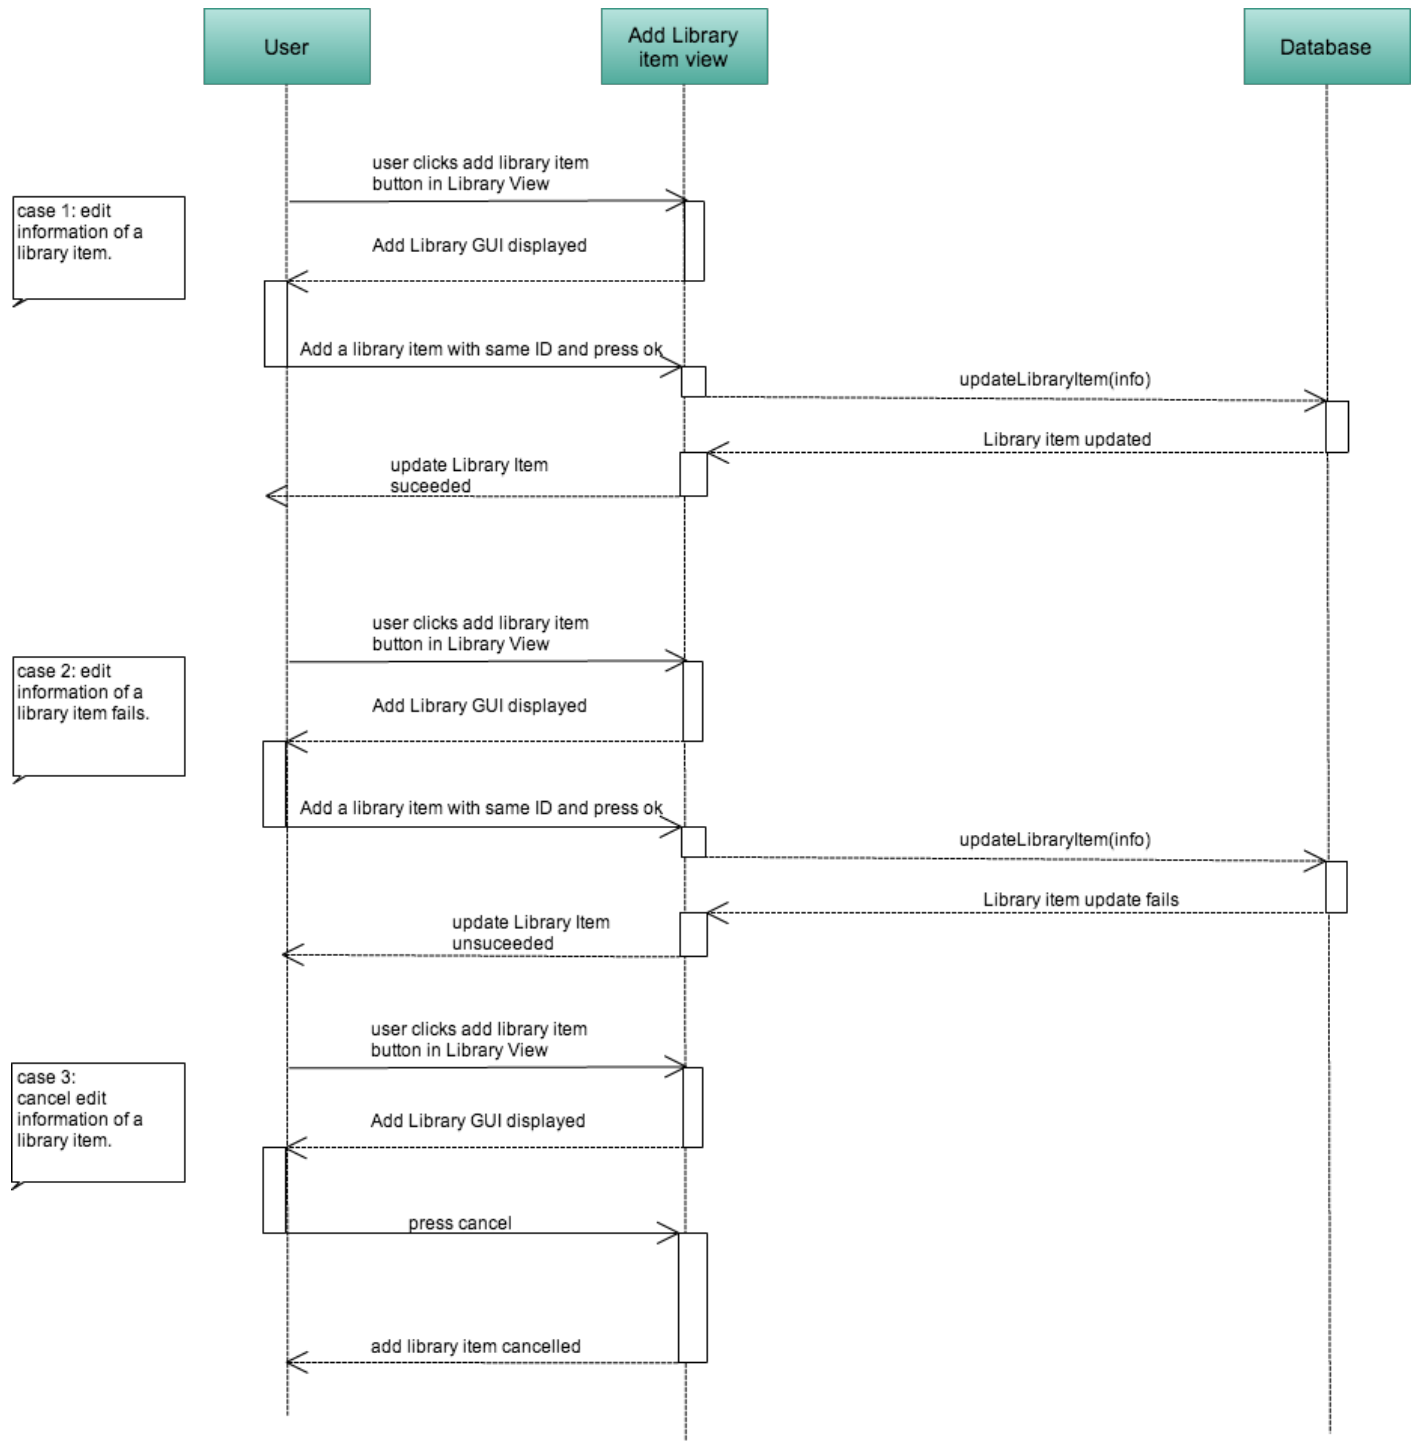

## Staff users can Log out of the system

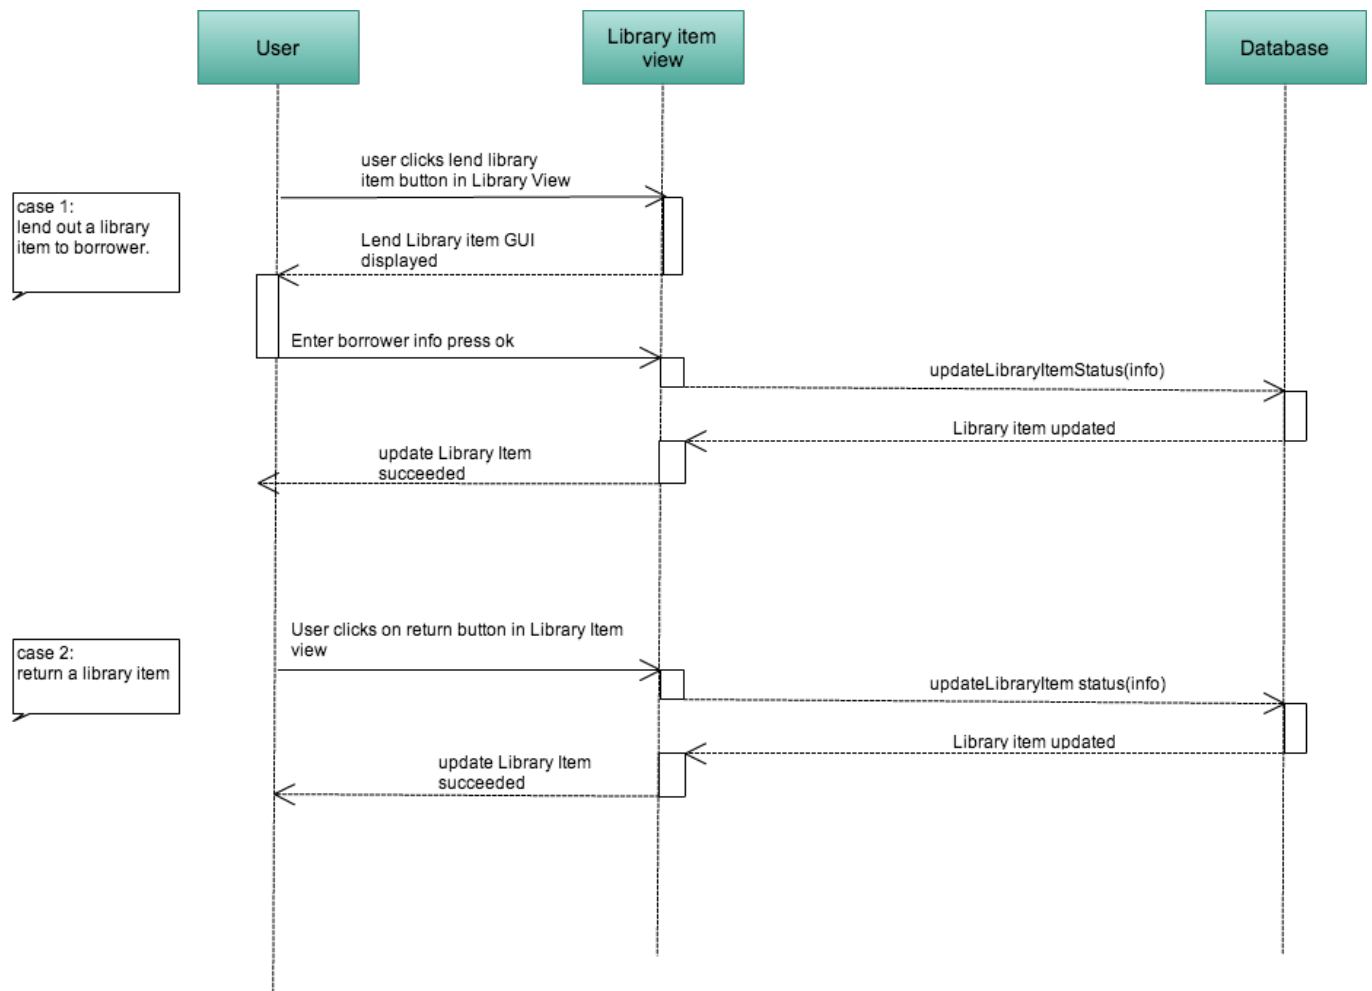

## Staff users can add a library item\*

## Staff users can Edit a library item detail\*

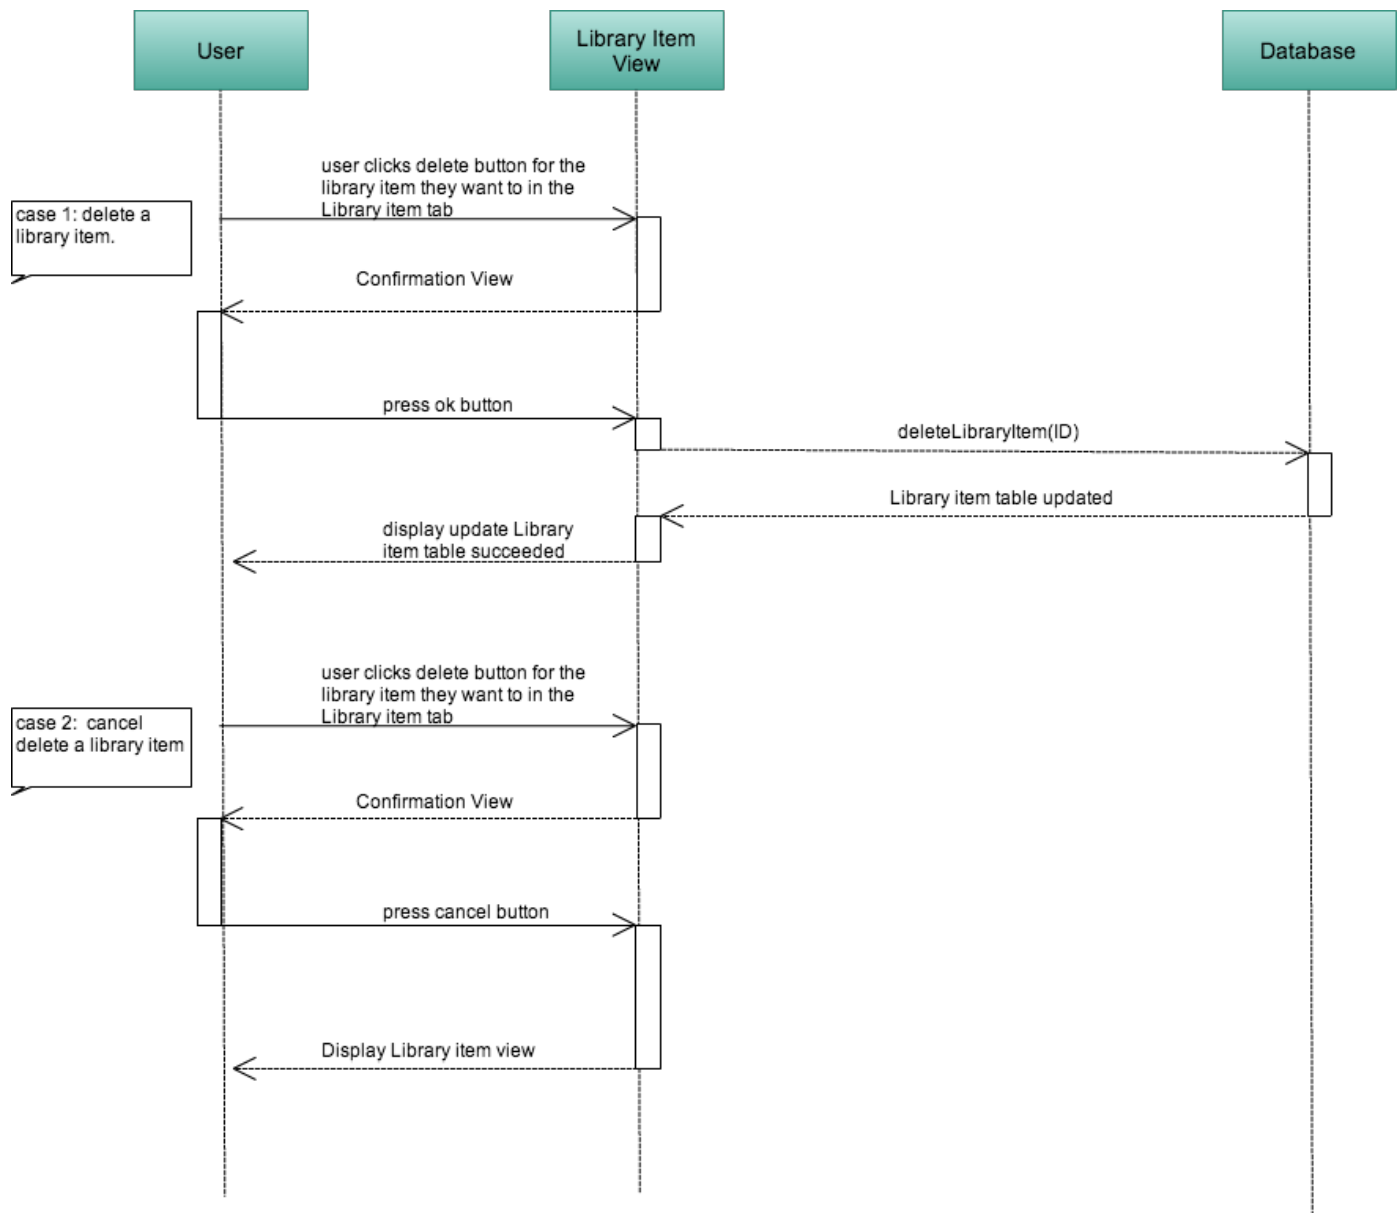

## Staff users can Lend/return library item\*

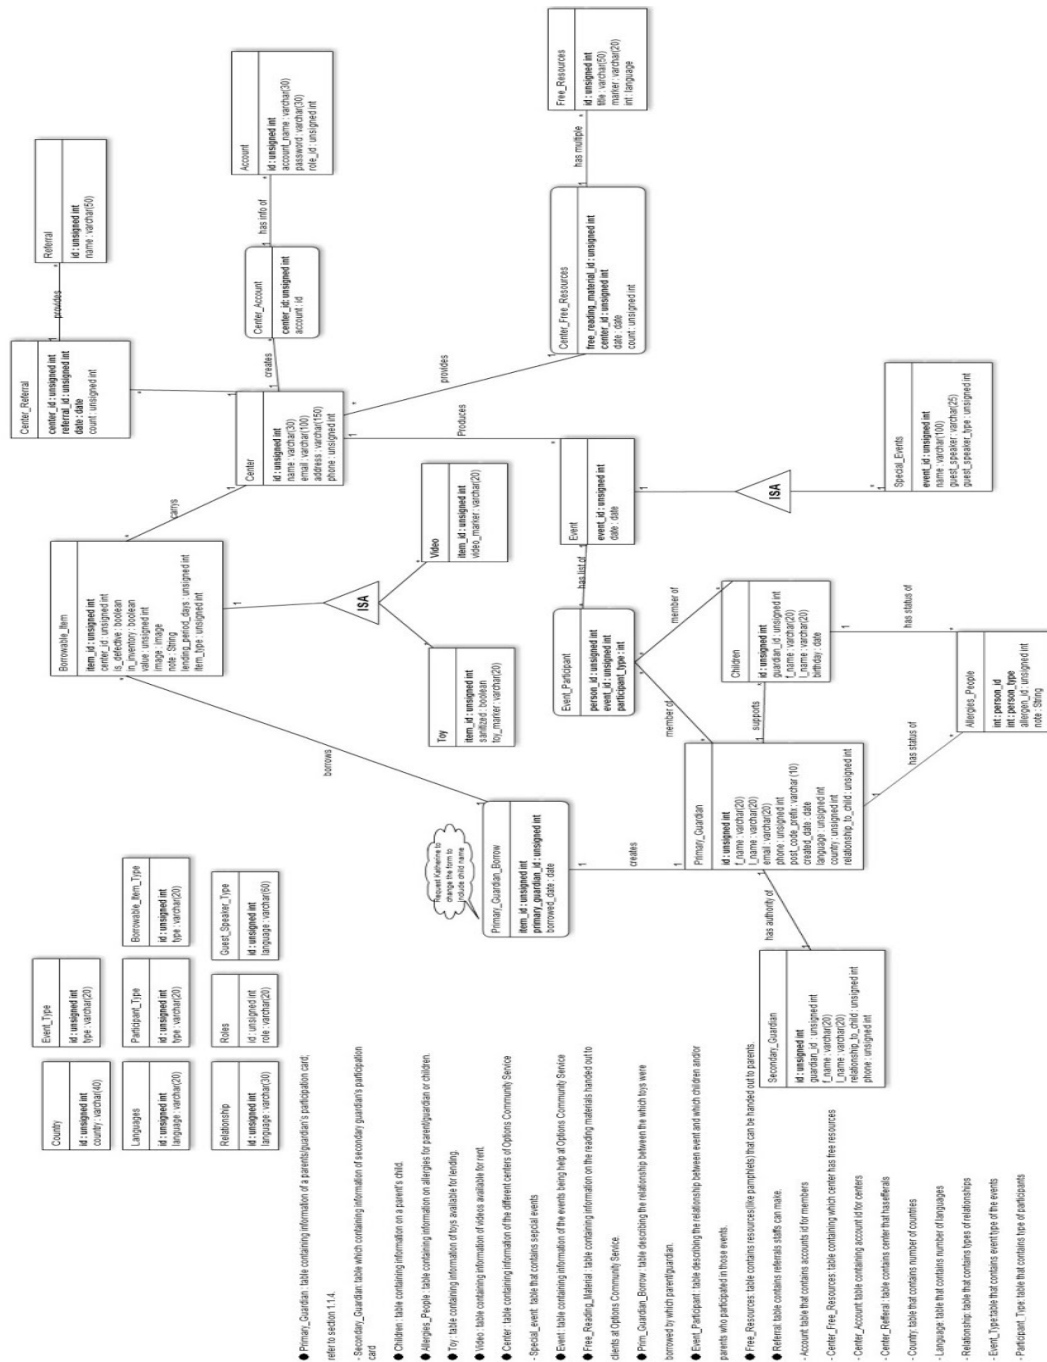

## Staff users can delete a library item\*

**\*Extra Features**

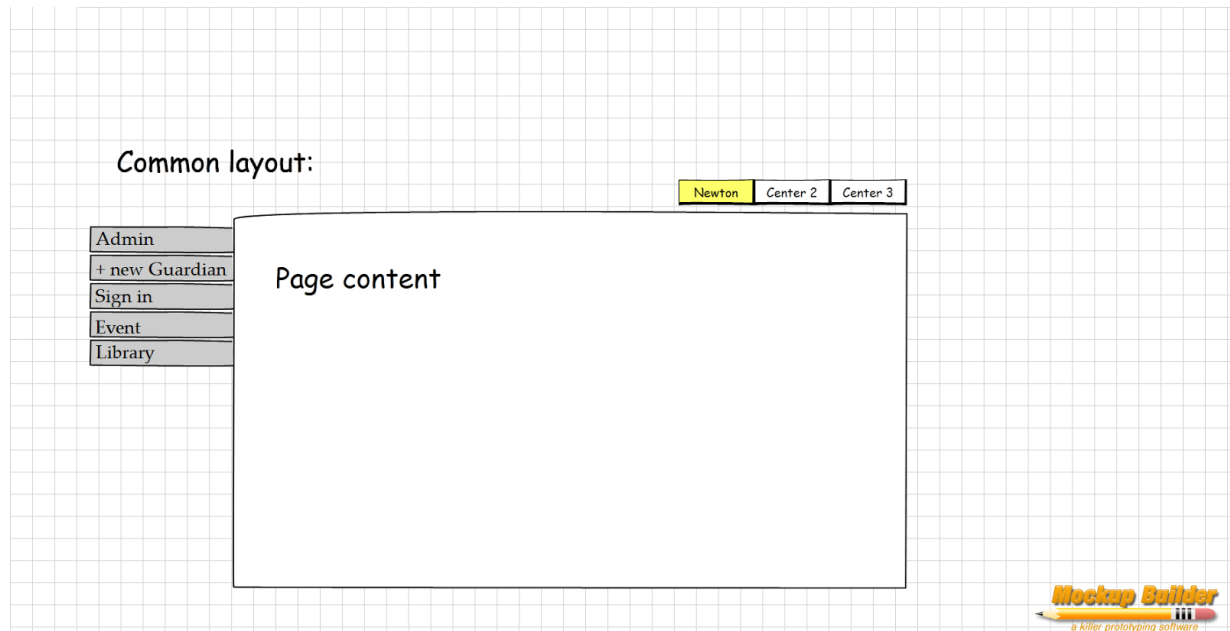

## 6 User Interface Design

## 6.1 Application Control

### 6.1.1 Common layout

This is the default template for staff user and admin user. The page content will be changed based on which tab is selected. Only Admin user can click on the Admin tab. After the admin tab is clicked, the common layout will be changed to admin layout.

### 6.1.2 Admin layout

This page will be shown when the Admin tab is clicked. Only admin user can click this tab.

### 6.1.3 Basic UI element rule

Page Tabs: The tab being selected should be highlighted in yellow.

Center Tabs: Each center should have its own theme color (being defined when the center is created). When a center is selected, that center's theme color should be displayed as background color.

## 6.2 Screen 1..n

### 6.2.1 main page

This page will be shown when no tab is selected. All of the primary guardians in the database will be shown in a list.

**Main:**

Search

Sort by: Name Phone number Item Three

name	phone number	Last visit time	
Rufus Zhu	778-898-4685	23 Feb 2013	<a href="#">View Detail</a>
Item Two	Item Two	Item Two	<a href="#">View Detail</a>
Item Three	Item Three	Item Three	<a href="#">View Detail</a>
Item four	Item four	Item four	<a href="#">View Detail</a>
Item five	Item five	Item five	<a href="#">View Detail</a>

**Mockup Builder**  
a killer prototyping software

## 6.2.2 + new guardian

This page will be shown in the “page content” of common layout when the + new guardian tab is clicked. User can use this page to register a new patient to the database.

**Main:**

Newton Center2 Center3

Admin  
+ new Guardian  
Sign in  
Event  
Library

First Name:  Last Name:

Phone Number:

Email:

Partner:

Children's Name:  Birth Date:

Children's Name:  Birth Date:

Children's Name:  Birth Date:

Children's Name:  Birth Date:

Allergies:

Emergency Contact Name:  Phone Number:

a killer prototyping software

### 6.2.3 Generate report

This page will be shown in the “page content” of admin layout when the Generate report tab is clicked. Only admin user can click this tab.

**Report**

Newton Center2 Center3

Staff  
+ New Staff  
+ New Center  
Generate Report

StartDate:  End Date:

Center 1 ☐ Center 2 ☐ Center 3 ☐ Center 4 ☐

Number of Employee ☐  
Number of new patient ☐  
Number of new child ☐  
Item four ☐

Generate Report

Mockup Builder  
a killer prototyping software

### 6.2.4 Sign in

This page is for guardians to sign in. All of the primary guardians in the database will be shown in a list. It also has a search feature to find the guardians quickly.

**Sign in:**

Newton Center2 Center3

Admin  
+ new Guardian

a killer prototyping software

### 6.2.6 Library item (Library item includes video, books, and toys)

This page will be shown when the library tab is selected. All of the items in the database will be shown in a list. It also has a search feature to find the items quickly.
